## PROFESSIONAL SUMMARY

Full Stack Developer with hands-on experience building backend systems, REST APIs, and workflow automation pipelines. Comfortable across the stack with Node.js, React/Next.js, and AWS S3 — from writing backend logic and working with databases, to debugging and fixing issues on live, production websites.

## EDUCATION

**Brahmdevdada Mane Institute of Technology**

**Solapur, Maharashtra, India**

*B.Tech, Computer Science & Engineering*

## TECHNICAL SKILLS

**Backend & APIs:** Node.js, Express.js, REST APIs, JWT Authentication, Microservices, Unit Testing

**Languages:** JavaScript, TypeScript, Python, Java

**Databases:** PostgreSQL, MySQL, MongoDB, Redis, Prisma ORM

**Frontend:** React.js, Next.js, TailwindCSS

**Cloud & DevOps:** AWS (S3), Docker, Git, GitHub, CI/CD

**Automation & Integrations:** n8n, Playwright, Selenium, Web Scraping, Apollo APIs, Gemini AI, LangChain

## WORK EXPERIENCE

**Tech Intern, Founder's Office**

**Oct 2025 - May 2026**

*Avacasa, Remote*

- Built an n8n workflow that used the Apollo API to automatically find lead details (name, email, company) and populate them into Google Sheets, replacing manual lead searching and data entry.
- Built browser automation and structured data extraction pipelines using Playwright and Selenium to scrape and process data from dynamic web sources.

**Full Stack Engineer Intern**

**Oct 2024 - May 2025**

*FishyHub, Remote*

- Implemented backend business logic and pricing workflows, and redesigned PostgreSQL schema.
- Designed and integrated an Address module enabling multiple user addresses per account and smoother order-processing workflows.
- Tested and validated REST APIs, pricing flows, and database interactions, improving workflow correctness and data consistency across the platform.

## KEY PROJECTS

**CloudVault — Cloud File Management Platform** 2025

[Live Demo](#) ~ [GitHub Repo](#)

- Built a full-stack cloud storage platform (Next.js, AWS S3, PostgreSQL, Prisma) supporting file uploads, nested folder hierarchies, and real-time storage usage tracking — similar to Google Drive.
- Designed a folder-hierarchy system on top of S3's flat object structure, with metadata persisted via PostgreSQL, plus shareable links with access control for secure file sharing.

**E-Commerce Platform with Semantic Search** Mar 2024

[Live Demo](#) ~ [GitHub Repo](#)

- Built a complete e-commerce platform (React/TypeScript frontend, Express/Node.js backend, PostgreSQL database) with AI-powered semantic search using Google Gemini embeddings and Qdrant vector DB — demonstrating full-stack capabilities from UI to database optimization.
